Use the conversion table only when you have to make an actual payment. The table gives the equivalent in Naye Paise coins of the existing coins for value rendered in any single payment.

Rounding off as made in the conversion table will be necessary, only when you have to make an actual payment. ½ Naya Paisa and below will be ignored and more than one half of a Naya Paisa will be treated as one Naya Paisa. When for purposes of calculation, exact equivalents are required, you should work out the figure at the rate of 100 Naye Paise to one rupee or 16 annas, 64 Pice or 192 pies.

I PART

IMPORTANT NOTE

1 *Para.*

This Reckoner is useful to calculate Land revenue, Land cesses, Educational and other cesses, Fasali irrigation Taxes, remissions etc. for cents ranging between 1 to 99 cents, for Naye Paise ranging between 1 to 99 N.P., for rupees ranging between 1 to 100 rupees, the rate being a number of your choice in Naye Paise or in rupees for one acre or for one rupee.

Detailed Note

This reckoner will be useful—

A. To calculate the amount for cents between 1 to 99 or for acres between 1 to 100 at the rate of Naye Paise of your choice per acre—

To calculate the amount for cents between 1 to 99 or for acres between 1 to 100 at the rate of rupees of your choice per acre—

B. To calculate the amount for Naye Paise between 1 to 99 or for rupees between 1 to 100 at the rate of Naye Paise of your choice per Rupee—

To calculate the amount for Naye Paise between 1 to 99 or for rupees between 1 to 100 at the rate of rupees of your choice—and you can find the answer in one and the same reckoner, a privilege which is rather rare in other reckoners.

(2) You should treat the figures from 0·01 to 0·99 that are shown in the 1st column of this reckoner as cents with regards to Land Revenue and irrigation Taxes, as Naye Paise with regards to cesses,—

You should treat the figures 1·00 to 100·00 as acres with regards to Land revenue and Irrigation Taxes, as rupees with regards to cesses according to your needs.

(The other details of the figures in this column are furnished in Para II Shedule B.)

II Para.

If we refer both the I and II Parts of this reckoner which deal with Land revenue and Salary respectively we can calculate the interest.

An Important Note regarding money-lending for interest.

The employees in Government are paid their specified salaries in full for all the months alike though the days in them vary. In civil courts it is a tradition to treat the period from the date of the Pro-note to the same date next year as one year without considering the variation of days in the months. In the matter of limitation also it is counted likewise. Businessmen too follow the same method in their accounts. A tradition is set in Andhrapradesh to calculate interest for one month only even for the Pro-note written on the 17th of February having 28 days to 17th March or for the Pro-note written on the 17th of March to 17th of April. The difference in the days are ignored for matters of calculating the interest. For all these reasons we have taken 30 days for each month according to chardramana authority in preparing the *I Part* of this reckoner dealing with Land revenue and the *II Part* dealing with salaries. We can calculate the interest with the help of these two Parts.

Example—

Calculate the interest for Rs. 137 for a period of 7 months 13 days at the rate of Rs. 0·53 per month for 100 Rupees. Multiply Rs. 137 into 7 months separately and the figure that you get is (137×7)=959. If the Principle is Rs. 137 for a period of one month what will be the principle for 13 days ? To calculate this refer the II Part. In that the amount for 13 days at the rate of 120 Rs. per month is shown as Rs. 52 and at the rate of Rs. 17 per month for 13 days is shown as Rs. 7·37. The amounts put together will be Rs. 59·37. If we add this amount to Rs. 959 we get Rs. 1,018·37. The interest for Rs. 1,000 is (10×53=530) Rs. 5·30. For the balance amount Rs. 18·37 (In calculating the interest we have to ignore 50 N.P. and less than that and treat 51 N.P. and more as one rupee) we have to ignore 37 N.P and calculate the interest for Rs. 18 only. [One rupee is 100 Naye paise and so we have to ignore the point in "1·00" which we find in the I Part I column and treat it as Rs. 100 and likewise we have to treat "0·01" as one rupee and so on.] According to the method that is shown in

the square bracket we have to treat "0·18" as Rs. 18 and the interest is Rs. 0·10 as shown in the reckoner. If we add this to the previous amount Rs. 5·30 we get the interest as Rs. 5·40.

Note—

A. If we want to calculate the principle and interest for the days specified, we can calculate the same for 20 days. If it is more than 20 days we have to take the amount for one month and then deduct the Principal or Interest for the difference of days from such amount.

Example—

(For 20 days and less than 20 days the example that is shown in Para II may be followed. For more than 20 days one example is given here in detail.)

Suppose we have to calculate interest for a Pro-note written on the 17th of March till the 12th of September. Then the period for which we have to calculate interest will be 5 months 26 days. These 26 days are more than 20 days as specified above. So we have to calculate interst or principal for 6 months i.e., upto the 17th of September. The difference between the dates are 5 days. We have to deduct the interest for 5 days from the interest amount calculated for six months. Then we will get the required interest.

B. We can calculate the method to find out the principal (137 × 7 = 959) and the method to calculate interest (10 × 53 = 530) as shown under the example in Para II with the help of the recknoners themselves. But as it is thought that much time would be lost in consulting the same it is stated that it will be easier to calculate the same on a separate paper. If we want to find out only by the help of the reckoners you have to treat 1 to 9 and 10 to 100 as months in the figures from 1·00 to 100·00 as shown in I Part I column to find out the principal. The amount for months for Rs. 100 in the example is Rs. 700. For Rs. 30 the amount will be Rs. 210. For 7 Rs. Rs. 49. If we add these three amounts we get the principal i.e., 959. To find out the interest we have to ignore the point in 1·00 to 100·00 shown I Part I column and treat 1·00 as 100 Rs. and 100·00 as 10000 Rs. Likewise the figures in between may be treated as hundreds and the interest for Rs. 1000 at the rate of 53 N.P. is Rs. 5·30. We can calculate the above by any of these two methods of our choice.

C. The example in Para II will help to find out principal or nterest for extra days in a month and for rupees below 100.

D. The method to find out interest for the figure that we get by multiplying principal by time is followed here. The methods to find out such amount, and interest are shown in the example under Part I and in A & B shedule in detail.

Readers who wish to refer this reckoner will bear in their mind the following—

(1) If we want to find out the principal for the extra days in a month the Reckoner in II Part which is worked out for 30 days in a month will be useful.

(2) If we want to find out the principal for the complete months leaving the balance days we have to ignore the point in the figures from 1·00 to 100·00 and treat them as *months*.

(3) In calculating the interest we have to treat the figures 1 to 99 shown as 0·01 to 0·99 in column No. 1 and the figures 100 to 10000 shown as 1·00 to 10·000 as rupees ignoring the decimal point in them. The readers should bear the above things in their minds and calculate accordingly.

PREFACE

This ready reckoner helps to calculate Salary, Rent, Interest etc. for a month of 30 days. In order to facilitate people refering this reckoner calculations for each day is furnished here at one place in seven pages. Accordingly salaries etc. are calculated for months of 28, 29 and 31 days also separately. By this the bulk of the volume is reduced to 56 pages which will ordinarily be in hundreds of pages to calculate the same for at least Re. 1·00 to Rs. 500·00. In the Printer's point of view also this kind of arrangement is found advantageous and hence this reckoner is made available for a lesser rate. Accountans need not feel dis. appointed if they do not get the answer straight for the specified salary. We will have this difficulty in any reckoner. By comparison we can easily calculate the same. An example is worked out here for the guidance of the accountants.

Example :—

A person drawing a monthly salary of Rs. 380·00 works for 13 days in the month of February having 28 days. Calculate the amount due to him for the days he worked in the month.

In the reckoner of salary, rent etc. for months of 28 days this salary i.e. 380·00 comes in between 364 and 392 rupees and we can calculate the salary as follows.

(1) According to the reckoner the person drawing a monthly salary of Rs. 392·00 will get Rs. 182·00 for 13 days. For the monthly salary of Rs. 12·00 the reckoner shows Rs. 5·57 for 13 days. If we deduct this amount from the previous one i.e. Rs. 182·00 we will get the required amount Rs. 176·43.

or

(2) According to the reckoner the person drawing a monthly salary of Rs. 364·00 will get Rs. 169·00 for 13 days. For the monthly salary of Rs. 16·00 the reckoner shows Rs. 7·43 for 13 days. If we add this amount to the previous one i.e. Rs. 169·00 we will get the required amount Rs. 17·643.

We can follow any of these two methods and get the answer.
